

COLPAI Project Drop-In: MONITORING DATA

Dust, noise and vibration are being monitored on-site at three points along the hoarding. Two environmental monitors are installed directly around the site on Basterfield House and Hatfield House.

The monitors are set within acceptable tolerance levels and we endeavour at all times to keep within the dust, noise and vibration control limits expected by the City of London and the London Borough of Islington. If any of the control limits are exceeded, the monitors will alert the site team so that early remedial action can be taken.

To date, the maximum vibration level recorded internally at Basterfield House was 0.8mm/s, which is considerably below the trigger level of 4mm/s.

Noise and dust levels remain within established limits. The on-site team will continue to monitor these results and make the monitoring data available on our noticeboard on the site hoardings.
